Value-Add

The Value-Add Department can partially or completely assemble components from a bill of customer approved materials into subassemblies (kits). This allows customers to order one item, tested and ready to install with one purchase order.

Hartfiel Automation's Value-Add team provide much more than just assembly and light manufacturing support - they bring the experience to quickly and efficiently design, test, and deliver the best solution for your assets.

ATLAS Controls Engineering

Hartfiel Automation's ATLAS Controls Engineering Team focuses on partnering with customers to achieve success in their equipment design and manufacturing.

Starting with consultation in the selection and specification of components, through on-site training and start-up assistance our team is committed to providing the engineering support required to create the hi-tech equipment of today's manufacturing marketplace.

Customer Profit Reinforcement (CPR®)

The Hartfiel Automation team uses their trademarked CPR process to uncover and document savings and profit opportunities. The program's purpose is to maximize customer profitability through an inspection of your components and processes, identifying savings opportunities, recommending streamlining - leading to real savings.

Companies both small and large have benefited from this program and have experienced increased profitability.
